1
First, screw the bulb into the lamp holder (The socket mouth is a bit narrow, you need to be careful to screw the bulb in)

2
Next, carefully place the glass bottle on top of the lamp socket and close the lamp cap.

Precautions:

A. Best use temperature: 22-25 degrees Celsius, 10-30 minutes of lamp to work.

B. Bulb Specifications: 120V R39 E17 25W

C. Do not violently shake the liquid of the glass bottle to prevent excessive bubbles

D. Place the lava lamp in place away from the child to avoid burns.

The 13 inch lava lamp uses the heat of the bottom bulb to melt the wax in the glass bottle. The melting process is very similar to the process of magma formation. The melting time is affected by the external temperature. The external temperature is low, the melting time is slow, the external temperature is high, and the melting time is about one hour. The most suitable temperature is about 25-27°, It may not be melted below 15 ° or higher than 30 may lead to wax divergence to form small particles. Long-term use in the environment above 30 may lead to wax damage and can not be recovered. The 13 inch lava lamp uses the heat of the bottom bulb to melt the wax in the glass bottle.
